

Low Impact Container Studio in Texas

By archives on Aug. 3, 2010 | Topics: Container Design, Modern architecture | Comments (6)

Dwell has the story on this 8'x40' **container space** in San Antonio designed by **Jim Poteet**. The tiny retreat – living space, bathroom, and sink and counter – is sandwiched by a foundation of recycled telephone poles and roof of lush greenery. The container also has bamboo flooring and wallcovering, an electric composting toilet from Sun-Mar, a mini-split heating and cooling system, and large floor-to-ceiling windows and doors to allow natural light. This illustrates, with impressive flare, what can be done with containers, don't you agree?
