

# Self Contained Unit On-Going Maintenance

## Daily

One cup of Compost Sure Green should be added per person per day of use, even if it was only used for urination. Add the Compost Sure Green through the hole under the toilet seat.

When you poop add a scoop!

## Weekly

Every other day turn the handle in a clockwise direction to mix and aerate the compost. When mixing, ensure that the drum rotates 6 complete revolutions which is 42 turns of the handle. Before turning the handle, add 2 teaspoons of Compost Quick on the surface of the compost. Compost Quick is an enzyme that will speed up the composting process.

## Bi - Weekly

Add two tablespoons of Microbe Mix to the Bio-drum™ to 'recharge' the compost. This will help to ensure your microbe colony stays constant and healthy.

# Sun-Mar

## Quarterly

Every 3 months you should rake the evaporation chamber. You can do this by removing the finishing drawer. Rake any solid debris from the inside floor of the toilet under the evaporation chamber (drawer), paying extra attention to the two back corners of the toilet as this is where debris may accumulate. Remove and dispose of the solid debris.

## Bi-Annual

Twice a year you should clean the drum screen. Spray the Bio-drum™ screen with Compost Quick and let sit for 15 minutes (this will help to loosen the debris if the screen is not too encrusted). Scrub the screen vigorously with a wire brush. If brushing the screen does not clear it and liquid is still not draining through the screen, you may have to use a screwdriver or nail to clear the holes in the screen.

Rotate the drum 6 complete revolutions which is 42 turns of the handle!

## Periodically

Remove compost from the Bio-drum™. When the Bio-drum™ is half full (level with the middle of the drum hub at the front of the Bio-drum™) it is time to remove compost.
